

Bespoke Supply

INFORMATION SHEET

We are a division of the Smiths Metal Centres Limited Group

Revision: tsm/bespoke-supply/04-04-2023

Page: 1 of 1

We combine our stock range with processing operations and an industry-leading bespoke IT platform to deliver **material solutions** tailored to your business needs.

Engineering raw material supply represents a headache for many businesses. Managing a large stock inventory may prove problematic, and companies often need more stock certainty and consistent quality.

Our bespoke supply solutions are instantly scalable and tailored to meet your requirements. When you adopt a supply package from us, we will revolutionise the efficiency of your supply chain while saving you money.

Our packages essentially create **through-cost-savings**.

Improved Efficiency:

Engineering businesses need help managing their material supply chain.

Balance sheet bloating, inaccurate reporting and unexpected stock shortages result in problems and additional costs. If this **rings true** with your business and you suffer from these supply headaches, then TSM Steel is an effective painkiller. We take away the pain of raw material supply by introducing measures which fit your business, allowing you to concentrate on what matters.

Our Group implements **bespoke supply solutions** in most of its core material supply divisions in industries serving aerospace, motorsport and general engineering. While our product range is more traditional and less 'cutting edge', the premise is the same. If you buy steel in significant volumes, **TSM Steel** provides supply chain efficiencies which will help you work smarter while saving money at the same time.

Examples of what we offer:

Elements of a bespoke supply solution may include:

- A single, streamlined supplier
- Complete supply chain visibility, 24/7
- Easy online portal access
- Online access to electronic documentation
- Accurate forecasting via bespoke MRP
- High level of stock certainty
- Fast, accurate ordering
- We can act as your material store
- Lineside delivery
- Tagged sub assemblies (one order for all materials)
- Consolidated invoicing
- Total sub-contractor visibility
- Total traceability using product bar codes
- Bar codes can carry your part numbers
- 'Live' stock information
- Up to date mill times
